

Figure 1: EIA tests and positive reactors in Canada, 1972-2015

Table 1: EIA tests and positive reactors in Canada, 1972-2015.

Year	EIA tests	Positive horses	Year	EIA tests	Positive horses
1972	49,114	1424	1994	67,356	29
1973	47,599	1190	1995	62,972	135
1974	55,592	1334	1996	71,810	179
1975	77,581	2172	1997	68,347	111
1976	96,389	1639	1998	66,177	96
1977	94,339	1509	1999	77,222	510
1978	94,815	759	2000	84,217	384
1979	90,739	635	2001	75,305	161
1980	97,168	583	2002	78,183	193
1981	93,202	373	2003	80,506	58
1982	92,524	463	2004	81,925	69
1983	83,913	336	2005	74,765	121
1984	83,793	168	2006	72,402	54
1985	78,617	94	2007	70,590	64
1986	80,464	322	2008	65,978	18
1987	113,979	410	2009	62,604	78
1988	83,178	166	2010	63,205	23
1989	79,116	127	2011	59,628	179
1990	75,248	105	2012	61,972	130
1991	73,741	52	2013	60,588	113
1992	70,984	71	2014	59,987	68
1993	67,551	264	2015	59,273	74

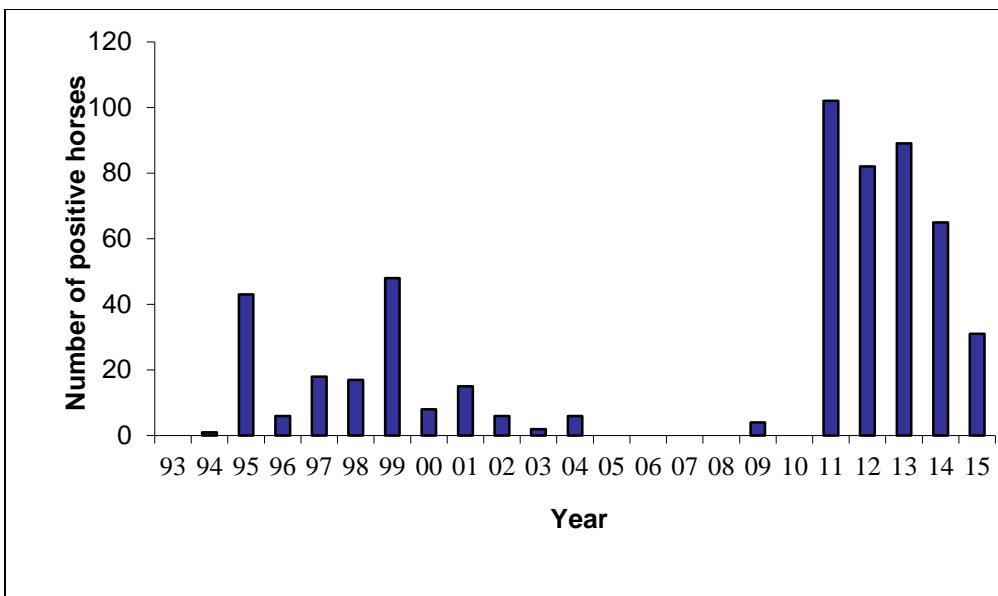

Figure 2: Number of EIA cases detected in Saskatchewan, 1993-2015.

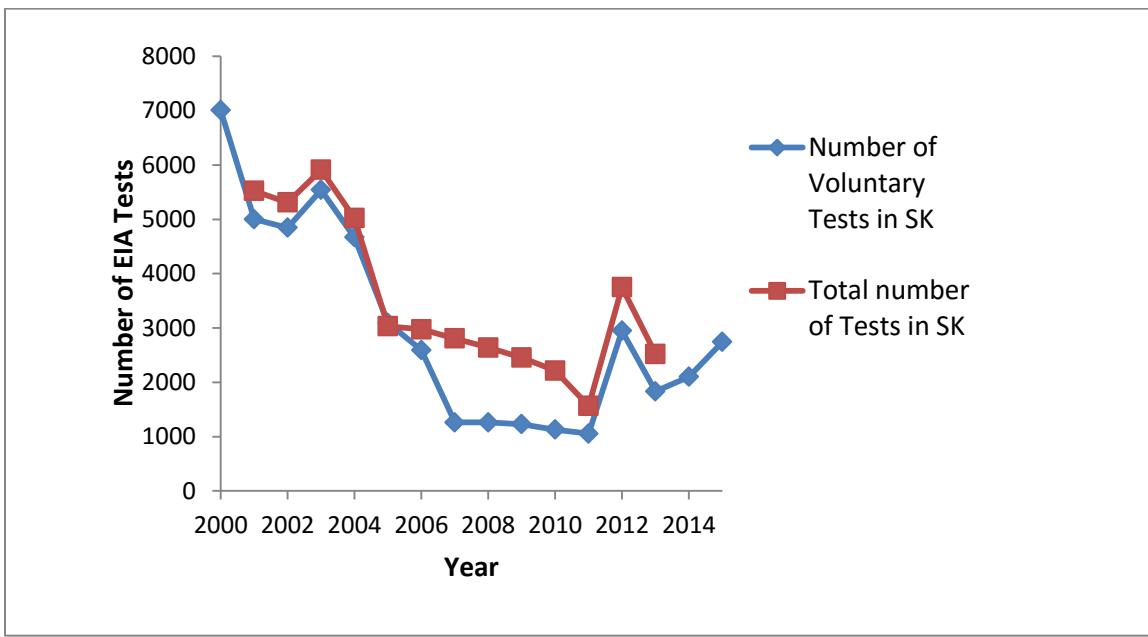

Figure 3: EIA testing trend in Saskatchewan, 2000-2015.

Table 2: EIA tests and positive reactors in Saskatchewan, 1993-2015

Year	EIA tests	Positive horses	Year	EIA tests	Positive horses
1993	2036	0	2005	3032	0
1994	3562	1	2006	2977	0
1995	4119	43	2007	2808	0
1996	8201	6	2008	2640	0
1997	5302	18	2009	2455	4
1998	3460	17	2010	2215	0
1999	8933	48	2011	1565	102
2000	7662	8	2012	3750	82
2001	5524	15	2013	2522	89
2002	5312	6	2014	*2101	64
2003	5912	2	2015	*2742	31
2004	5024	6			

**represents voluntary tests only; data from previous years includes voluntary and non-voluntary testing combined*
